

- \*Web & Video Conferencing
- \*Webcast & Webinar Services

**V-WebCast is the easy way to hold online meetings for small groups up to 1,000's at a fraction of the cost of other services.**

## Browser Based Web Conferencing

V-Webcast's browser based video conferencing software enables professionals across all industries to meet online effortlessly and affordably, using only an internet ready computer.

Management teams, sales and marketing professionals, creative and design teams, and many others can benefit from the increased productivity and the convenience of collaborating via webcasts, webinars, and web conferencing using V-Webcast's array of interactive features like polling, text chatting and screen sharing.

## Training & E-Learning

Deliver interactive online classes, E-Learning sessions and educate easily and affordably. Archive presentations and lessons for 24/7 on-demand access.

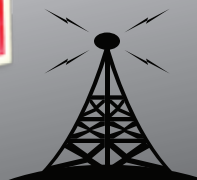

## Sales and Marketing

Conduct interactive online sales presentations and product demonstrations to clients across town or across the globe using your computer.

## PowerPoint Presentations

Get your message across with interactive webinars and webcasts featuring integrated PowerPoint® presentations, screen-sharing, polling, chat and more.

## V-Webcast Web Conferencing Features

### No Software to install

V-Webcast is completely web-based. It's comprehensive web conferencing, webcast, and webinar features are available using your browser. PC, MAC, or Linux - V-Webcast supports them all.

### Minimal System Requirements

Senders and recipients of web conference, webcast, and webinar presentations can deliver and access content 24/7 from any internet ready computer.

### Intuitive, Easy to use Interface

Flash based interface keeps you constantly apprised of important info. Including attendee status and elapsed meeting time. Presenters have total control over the features.

### Live Video

A web cam and a microphone are all you need to host live web conferencing with up to 5 attendees, using our feature rich web conferencing software.

### Live Audio

Voice over IP is seamlessly integrated for a completely interactive meeting using a microphone attached to the computer.
